## Storage of Pure Maple Syrup

**Unopened** syrup can be stored easily. It does not need refrigeration, store in a dry place at room temperature or lower. However, prolonged (more than one year) storage may cause the color of maple syrup to darken and the flavor may deteriorate slightly. If you are going to store syrup for over a year, it is recommended that you keep it in a freezer or cooler. This is the best way to prevent any chance of spoilage and to keep the syrup at its peak of quality. Maple Syrup **unopened** will keep for years.

Glass containers that we use will keep **unopened** syrup for at least three years. **Once open** pure maple syrup must be refrigerated. When stored at 40°F or lower, opened syrup can last 12 months from the packaged date on the bottle.

If a thin layer of mold develops on an opened container of syrup, it can safely be skimmed off and the syrup can be sterilized by bringing it briefly to 200°F or to a light boil. The syrup may darken, but the flavor will be unaffected.

### Expiration Date:

Each bottle and case is marked with the date packaged and an expiration date. In glass containers the expiration date is 3 years from the date of packaging. This is the time syrup can be stored unopened at room temperature.

### Warehouse Storage:

**Store in Cool Dry place out of direct sunlight**

**Glass – 3 years**

**Plastic – 2 years**

Storage conditions	Glass container	Plastic container
<b>Before opening</b> , keep at room temperature in a cool, dry place.	3 years	2 years
<b>After opening</b> , store in refrigerator (below 40°F)	1 year	1 year
